

Disease Registry

<http://www.kellysolutions.com/as/diseaseregistry/index.htm>

Features:

- A Central Repository of Animal and Plant disease incident reports
- Security features include: username and password access for state - specific information; and biometric (fingerprint recognition) access to map regional and national incidents of disease outbreaks
- Easy, Secure, Online information entry includes: disease name; date; confirmation of diagnosis; person reporting the case; location by address and GPS (for mapping feature), etc.
- View Incident Profiles
 - Access only by biometric authentication
 - Data may be viewed in text or map format
 - Map data may be zoomed / panned for nationwide analysis
 - Each map point may be clickable for greater detail of the reported case

Benefits:

- Easy Online entry process is much quicker than filling out existing paper-based reporting forms
- Alerts of significant local, regional or national interests can be sent for rapid communication to appropriate individuals and agencies
- Mapping feature identifies scope of incident outbreak and monitors spread to other areas
- Secure database is accessible only by personnel with username and password identification and / or biometric authentication

A Secure, Online database of animal and plant disease incidents meets homeland security requirements
